Networks and Security

Alireza Esfahani *BSc, MSc, PhD, FHEA, M IEEE, M ECSO*
Senior Lecturer in Cyber Security
Cyber Security Course Leader
School of Engineering and Computing
University of West London

UNIVERSITY OF WEST LONDON
The Career University

Configure FTP – File Transfer Protocol

Set up your network

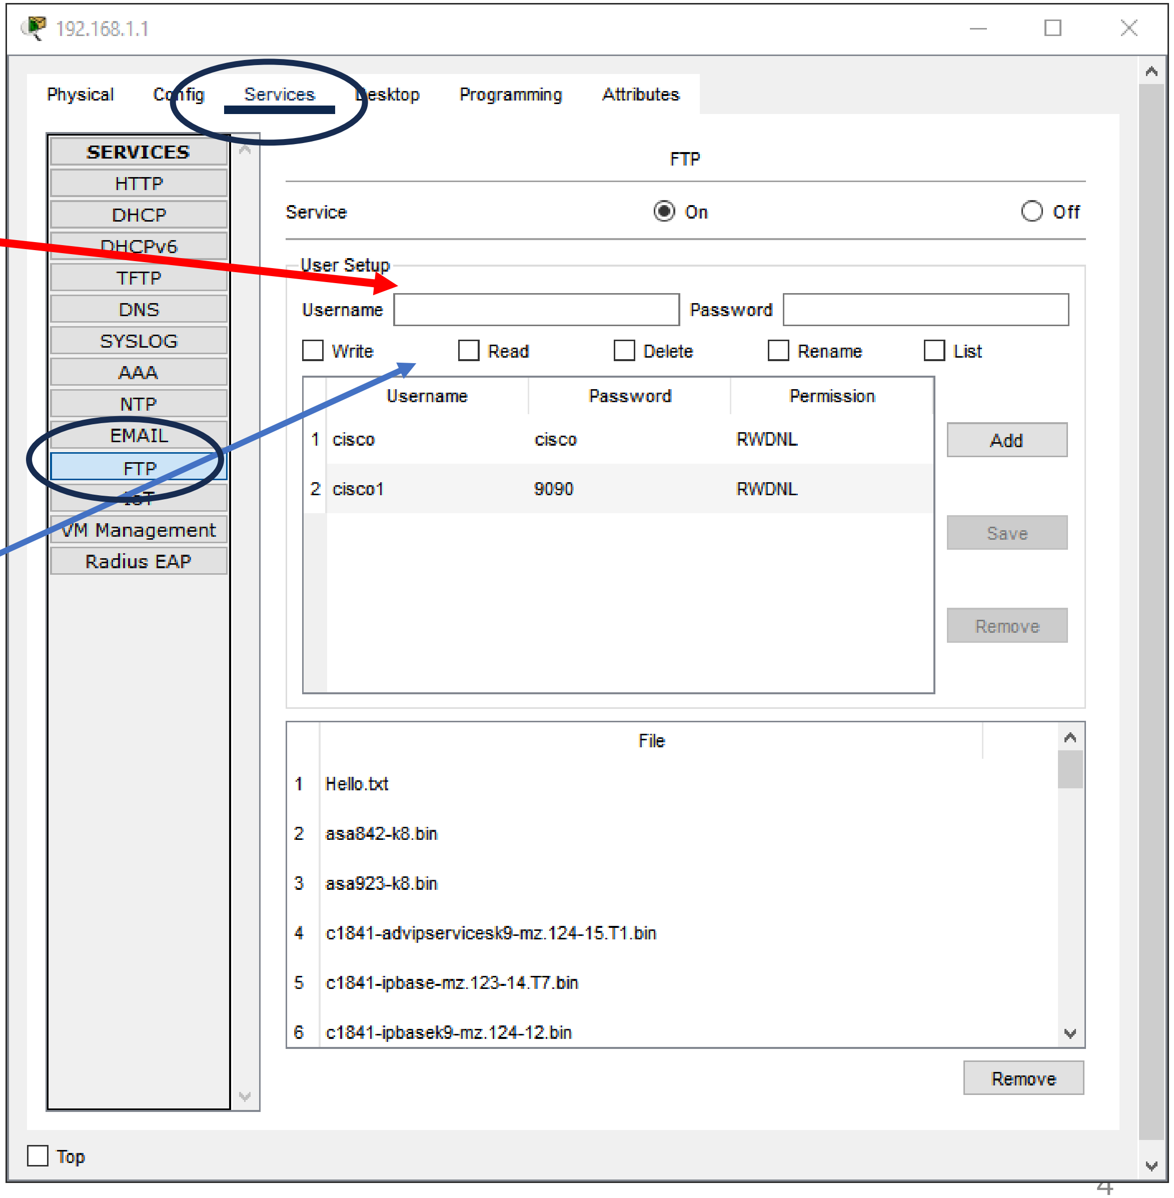
PC: 192.168.1.10

Server: 192.168.1.1

Server: User Set Up

On your Server and from Services tab, choose FTP, then enter your student ID as a Username and choose any password

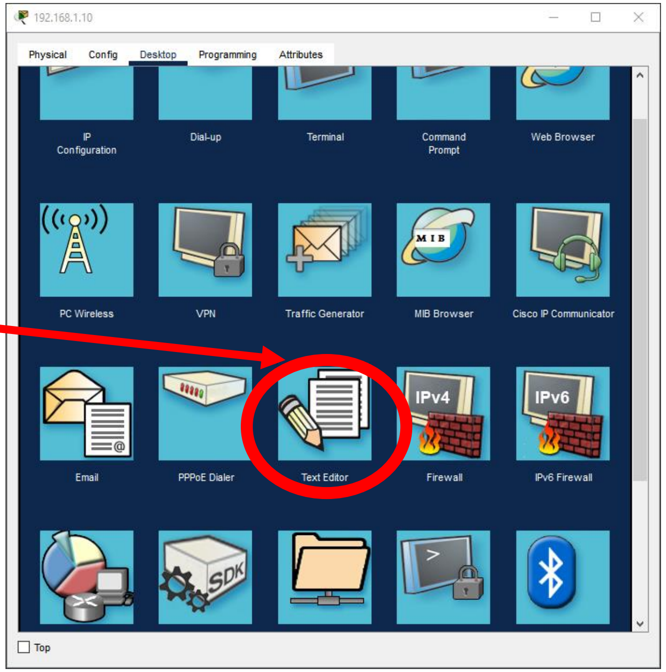
Make sure to enable: Write/Read/Delete/Rename /List

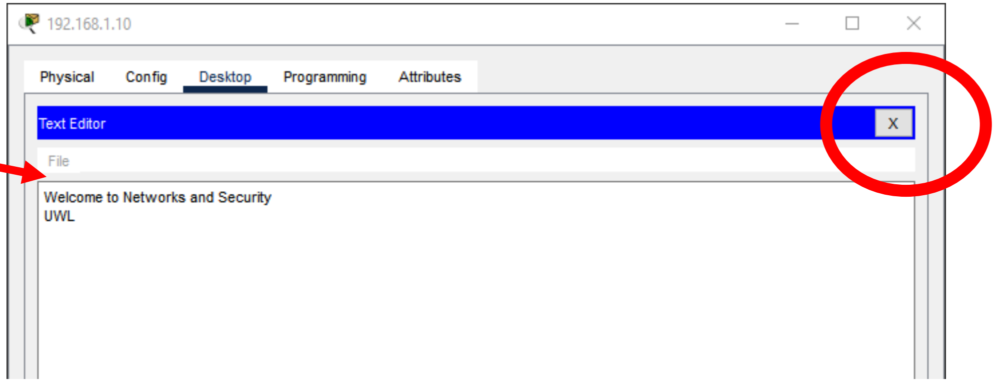


PC: Create a file

From Desktop tab, click on Text editor

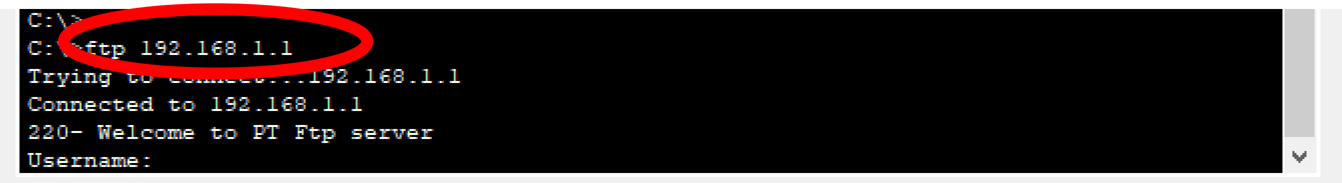
Then write whatever you like, then click on x, then choose a name to save your file (e.g., myfile.txt)





PC: FTP Connection

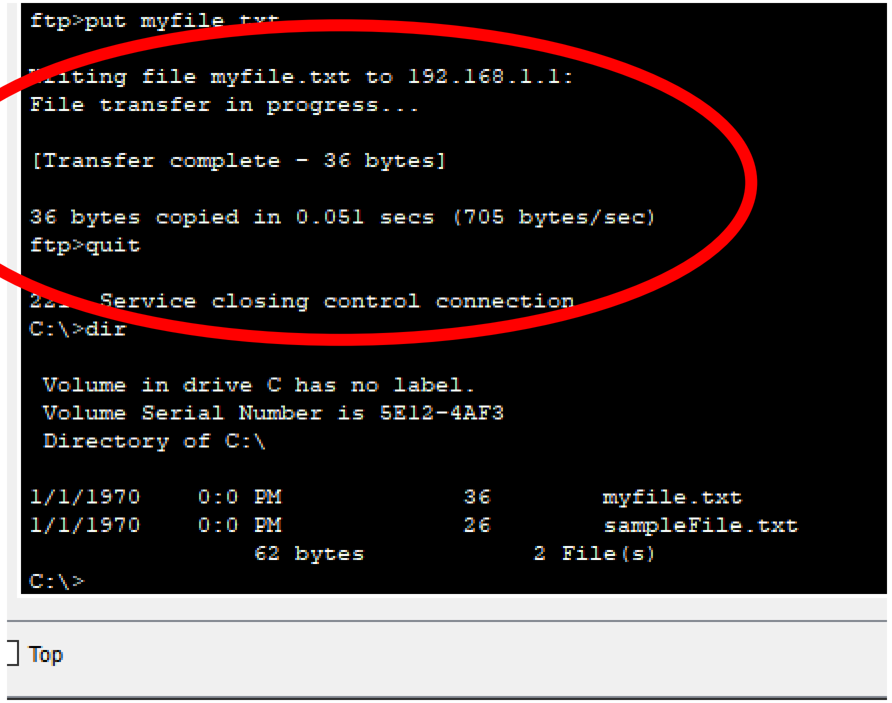
Open Command Prompt, then type: [ftp 192.168.1.1]()



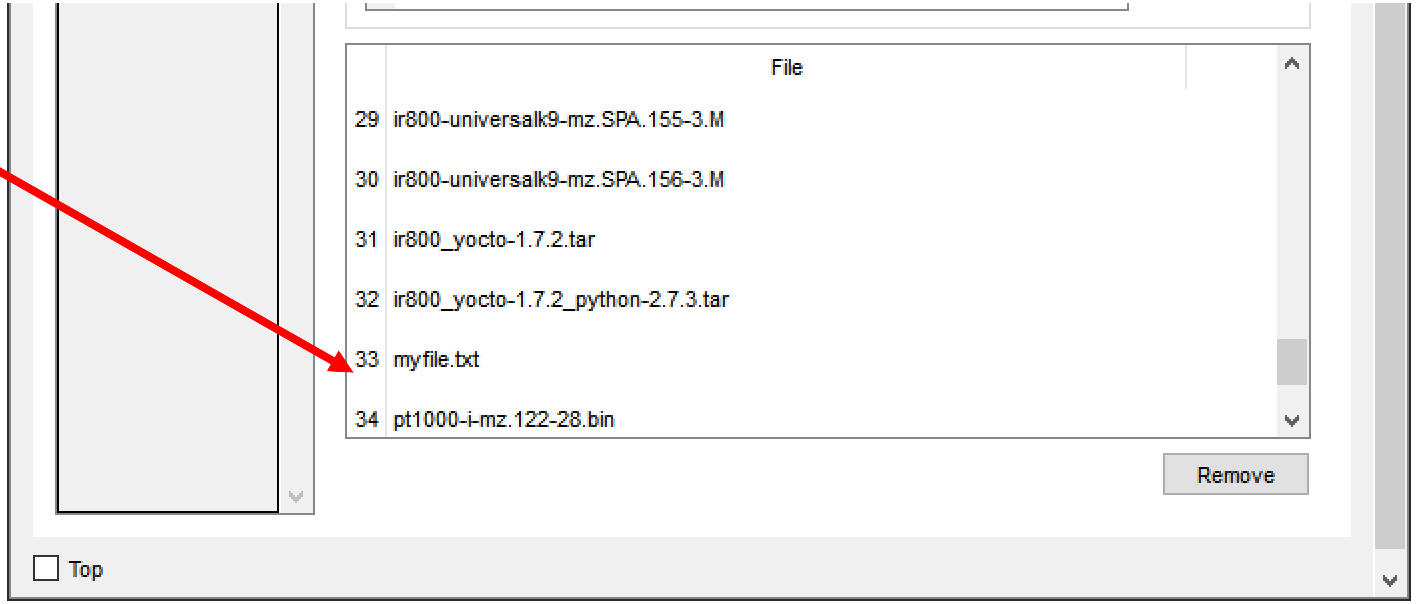
Then, you need to enter the username you chose before, and then your password; you should be able to see the command changes to: ftp>

FTP- Save

Now, use put command to save your file into your FTP server (e.g., put myfile.txt). Finally, type quit



Now go the Server, you should be able to see your file has been saved.



Exercise

Objectives

1) Creating the below topology (use the exact IP/Gateway addresses)
2) Showing that you can ping all devices
3) Creating a file on PC0, save it into the Server
4) Last step is to check if you are able to see the above file from PC1
